

Typically, organizations effectively use 50% of their production capacity only. Taurus Concepts LLC (“Taurus”) helps companies increase their production capacity by streamlining their business processes and improving their quality per change management techniques focused on results. The Taurus approach results in a sustainable performance improvement affecting both the top and bottom line per a reduction in costs and an improvement in productivity.

What makes us different?

1. In general, efficiency projects are only executed on a management level. Taurus acts and builds relations at every organizational level.
2. Ownership of the methodology throughout the entire company. Taurus will not leave until ownership at every level is secured.
3. Typically, efficiency projects are a one-off gain and only provide short term results. Taurus secures ownership of the new methodology and secures continuous improvement per extensive after project services and audits.
4. Taurus guarantees results:
 - a. 15%-25% reduction in operating costs by improving business processes and updating the management control system;
 - b. 70% ROI during the project (assume 36 weeks);
 - c. 250% ROI after one year of the completion of the project;
 - d. Early commitment when reductions in costs will be met (verified on a weekly basis); and
 - e. Taurus will not leave and continue the work until the guarantees are met, assuming a fixed price commitment.

Focus

Taurus focuses on realizing “sustainable” improvements. The following three concepts are at the foundation for realizing sustainable improvements:

- Process;
- Control; and
- Behavior.

Methodology

Our methodology is based on the methodology of Lean in combination with behavioral change management. This approach shortens the time-line of a regular Lean project, increases effectiveness and creates the basis for continuous sustainable improvements.

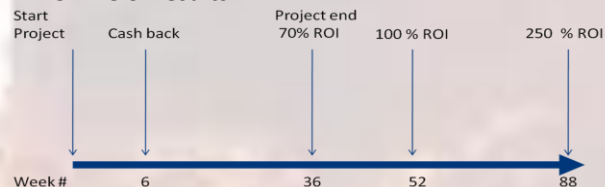

Results – bottom-up, bottom-line and top-line

Our approach combines a strict time-line and a commitment to engage every level of the organization from the bottom-up. This will ensure a quicker return on investment compared to other single methodologies, positively affecting both your top and bottom line results.

Project time-line

- A two week “TauruScan”, a preliminary assessment which provides access to information, and identify time, capacity, and waste. This assessment provides insight in expected savings.
- Eight weeks to identify the exact reasons for the amount of waste, and solutions will be generated. Actual savings will be generated after the sixth week.
- Twenty weeks to implement and take ownership of new efficient cost reducing business methods.
- Upon completion of the project, a one week assessment to secure sustainable results. Client’s choice for bi-monthly or quarterly assessment.

Time-Line of results

Deliverables

- Cash back of the first installation after 6 weeks.
- At the end of the project, the result will be a 70 % ROI cash back return run rate (100 % annualized).
- Success is guaranteed and secured through audits in weeks 48, 60, 72, and 84.
